Winter Math Puzzles

Welcome to Math Challenge #8. Math puzzles are fun to solve; these types of problems can give us great boosts in our math skills and problem solving skills.

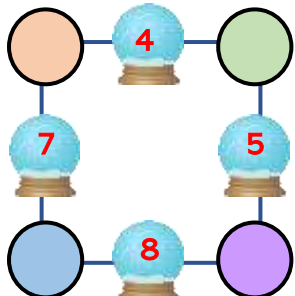

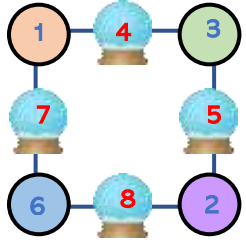

Kinder & First Grade: solve at least 3 problems.
Second & Third Grade: solve at least 7 problems.
Fourth Grade and above: solve at least 12 problems.

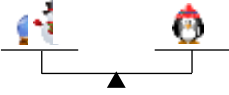

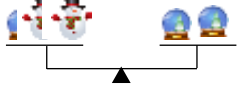

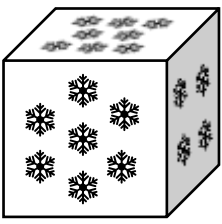

Answer

<p>1. Sanjana has a sheet of stickers (see picture). She used some snowman stickers. How many snowman stickers did she use?</p>		<p>5 [snowman stickers]</p>
---	---	-----------------------------

<p>2. This is an operation puzzle. Write down the correct operation (+ or -) in each box to make the sum correct.</p> <p>a. $\star 3 \square \star 2 \square \star 2 = \star 7$</p> <p>b. $\star 5 \square \star 4 \square \star 3 = \star 6$</p> <p>c. $\star 4 \square \star 1 \square \star 4 = \star 7$</p>	<p>a. + and +</p> <p>b. + and -</p> <p>c. - and +</p>
--	---

<p>3. If + = 9 and + = 4</p> <p> = ?</p>	<p>7</p>
--	----------

<p>4. Write the digits 1, 2, 3 and 6 in the circles so that each number in the snow globe is equal to the sum of the two numbers in the circles that are directly connected to the globe.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div>	<p><i>Orange circle = 1</i> <i>Green circle = 3</i> <i>Blue circle = 6</i> <i>Purple circle = 2</i></p>
--	--

<p>13. You may do guess and check on the value of each icon.</p> <p> = 5  = 1  = 20</p> <p>87 =       </p>	<p>      </p> <p>Or 4 snowmen, 1 snowflake, and 2 Christmas trees</p>
<p>14. In the last scale, you can take away penguin from both sides.</p> <p>Substitute this result into the second scale.</p> <p>After simplifying 1 penguin is half of globe and half of snowman.</p> <p>Substitute into the first scale.</p> <p>From here, you can see that snow globe is worth the same as a snowman. Which means 1 globe is 10.</p>	<p>10</p>    
<p>15. Haruki grabbed $5 + 3 + 4 + 2 + 1 = 15$ jellybeans from the bag. There are 20 more than what he grabbed left in the bag, so there are $15 + 20 = 35$ jellybeans left in the bag. There were $35 + 15 = 50$ jellybeans at the beginning.</p>	<p>50 [jellybeans]</p>
<p>16. A cube has 6 faces, and the picture shows we have 4, 7 and 8 snowflakes. The cube could have 3, 4, 5, 6, 7, 8 snowflakes or 4, 5, 6, 7, 8, 9 snowflakes. The first possibility would mean that each pair of opposite faces adds up to 11 (3 and 8, 4 and 7, 5 and 6). This would not work since we need 4 snowflakes on the opposite of 7 snowflakes while the picture is showing that the face with 4 snowflakes is adjacent to the face with 7 snowflakes. The second possibility works. The sum: $4+5+6+7+8+9 = 39$</p>	<p>39</p> 
<p>17. If three numbers are in ratio of 2 : 3 : 4, then their squares will be in ratio of 4 : 9 : 16 → total $4 + 9 + 16 = 29$ square units. $1421 \div 29 = 49$ (square units). This mean that the original unit is worth 7. The largest number of the three is $4 \times 7 = 28$</p>	<p>28</p>
<p>18. $4 \text{ pm} - 7 \text{ am} = 9 \text{ hours}$, the temperature rose $9 \times 4^\circ\text{F} = 36^\circ\text{F}$. On Jan 20 at 4pm it was $42^\circ\text{F} + 36^\circ\text{F} = 78^\circ\text{F}$. From 4 pm Jan 20 to 8am on Jan 21, 16 hours will pass. $16 \times 3^\circ\text{F} = 48^\circ\text{F}$. The drop in the temperature is $78^\circ\text{F} - 48^\circ\text{F} = 30^\circ\text{F}$</p>	<p>30 [degrees Fahrenheit]</p>

Solution is available on February 3, 2023
